A Specialist Approach to Integrity

Why NECE

We pride ourselves on delivering a cost effective and quality service to our customers. To ensure we deliver there is a major emphasis on new initiatives, research and continuous improvement. Our suite of services include: corrosion / erosion monitoring, oilfield microbiology, chemical monitoring, and sand management services. Each can be provided individually or as an added value, cost beneficial integrated service mix.

At NECE we believe a comprehensive approach intrusive monitoring is the ideal way to protect our customers' assets, whilst an integrated and holistic approach provides maximum cost benefit. NECE combines technical knowledge with practical hands-on experience. We deliver flexible, customer-focused packages in a service industry environment. As a service based company, NECE are operators of all equipment & technology available on market, therefore providing & recommending "best fit for purpose" equipment to suit customer needs. This also ensures compatibility of equipment and software throughout the asset.

Customer and employee feedback is fundamental when researching new initiatives and the NECE management team regularly seek this information as part of our overall service delivery.

Other benefits include:

Inhouse Multiskilled Teams

Reduce offshore manpower requirements / smaller teams / ability to accommodate urgent projects and "short notice" shutdowns / increased productivity / less bed space required & cost savings on mobilization.

Combined / Consolidated Service

More integrity data obtained in one visit, therefore adding value. Logistics handling reduced / one focal point / combined scopes / cost effective solutions / combined strategies / reduced vendors.
